Now Hiring: Researcher / Research Analyst

We study sleep and brain aging using genomic, cohort, and medical imaging data. Join us and grow from research questions and analysis to publications and presentations.

Openings	Work style	Growth	Support
TBD	**Hybrid**	**Publications & independent research**	**Conferences, training & computing**

Responsibilities

- Manage and analyze cohort, clinical, genomic, and imaging research data (epidemiology/statistics)
- Prepare tables and figures for manuscripts and reports; review related literature
- Support study planning, data access and management, and project coordination

Qualifications

- Master's in public health, epidemiology, statistics, bioinformatics, or related field (or equivalent experience)
- Independent proficiency in at least one of R or SAS
- Basic epidemiology and statistics; reading and writing English scientific papers
- Self-directed work management, clear documentation, and online collaboration

Preferred

- Cohort or healthcare big data; longitudinal or survival analysis
- GWAS/PRS or quantitative medical image analysis
- Writing English scientific papers

What we offer

- **Work style**: Hybrid — on campus 3 days/week for 6 weeks, then 2 days/week (adjustable)
- **Workspace**: On-campus research space (Chuncheon); remote or on campus on other days
- **Compensation**: Negotiable by experience and role (per institutional regulations)
- Research computing environment and analysis software
- Authorship and independent research based on contribution
- Support for conferences (domestic/international), training, and publication fees

Selection · Document review → Interview
